

Kontent by Kentico APIs overview

November 24, 2021 • Jan Cerman • 1 min read

The Kontent by Kentico APIs are designed so you can retrieve and manage content for any application.

API overview

- Delivery APIs let you pull content from Kontent to your web applications and digital devices.
 - [Delivery REST API](#)
 - [Delivery GraphQL API](#)
- [Management API v2](#) lets you manage and publish content in Kontent.
- [Management API v1](#) lets you manage content in Kontent.
- [Custom Elements API](#) lets you implement your own Custom elements and use methods from this JavaScript API.
- [Smart Recommendation API](#) (deprecated) lets you provide personalized content recommendations to your users.

You can also try out the REST APIs in Postman:

API changes

To see all changes made to the APIs, watch our [product changelog](#).

API availability

To check the status of the Kontent APIs and the app, have a look at the [Kontent status page](#).

 The [Kontent by Kentico](#) domain deprecation for API endpoints

After we changed the name to Kontent by Kentico, Kontent's main domain has changed to [kontent.ai](#).

If you still call the API endpoints through the obsolete [kontent.com](#) domain (either directly or using an old SDK), update your SDK to the newest version or change the URLs to [kontent.ai](#) as both domains will run in parallel for a limited time only.
